

"SpectraPeel™ is a simple, safe and effective treatment for active acne providing consistent results!"

Kevin Duplechain, MD, FACS
Laser Skin Care of Louisiana

"Nodular and cystic lesions begin to reduce in size after just one session. It is also a very good treatment for sebum reduction to control future acne outbreaks."

Ask your doctor today about how you can learn more about this effective acne treatment program.

- Controls all types of acne
- Reduces sebum production
- Improves blemishes from inflamed acne
- Safe for cystic acne
- Eliminates the need for oral medication
- Improves uneven skin tone

SpectraPeel™

A NEW WAY TO COMBAT
ACNE

" A proven system for treating acne that delivers dramatic results quickly."

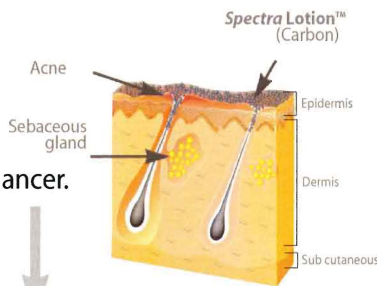

Common Acne Problems that Affect 85% of all Teenagers

Acne is the term for clogged pores (blackheads and whiteheads), pimples, and deeper cysts or nodules that occur on the face, neck, chest, and even on backs and arms.

The *SpectraPeel*™ System for Treating Acne:

1st Step

Application of a topical photo-enhancer.

2nd Step

Using a laser, the area will be lightly heated causing stimulation of the skin cells.

3rd Step

The laser will then be used to create a peeling effect to remove the topical photo-enhancer. This will clean away the skin surface and clogged pores, which will reduce oil production and pore size.

“Ever since I had my *SpectraPeel*™, all of my acne has cleared-up.”

How can *SpectraPeel* control my acne?

The 3-step laser treatment process uses photo-acoustic technology to control the inflammation of acne, reduce sebum production, and induce skin cell turnover.

How many treatments are required?

At the first treatment session, all acne types will begin to reduce in size. Several more treatments will be needed within a 2-3 week interval. Acne is dramatically reduced. Consult your physician for follow-up treatment.

How long will clinical results last?

While laser treatment is considered to be long lasting, they are not permanent. For maintaining clinical results and improving your skin's condition. Consult your physician for your individual needs.

How much improvement can I expect?

You will see improvement after the first treatment, but results are more dramatic after 3 or 4 treatments.

How do other treatments compare to the *SpectraPeel* ?

Unlike other procedures, *SpectraPeel* is virtually pain-free with no downtime. The treatment offers a greater margin of safety than topical or oral medications and has predictable and consistent results.

Better results with no downtime...
